

Nifty 100 Analytics — Analyst Guide

Version 1.0 · Day 44

1. Getting started

Run make load to build the database, make ratios for the ratio engine, make dashboard for the Streamlit UI, make api for the REST API, and make test for tests.

2. Using the Streamlit screener

Open <http://localhost:8501>, choose 03 Screener from the sidebar, click a preset (e.g. Quality Compounder) to auto-fill the sliders, then adjust thresholds and download the CSV result.

3. Navigating dashboard screens

01 Home: market KPIs. 02 Profile: company deep-dive. 04 Peers: radar comparison. 05 Trends: YoY metrics. 06 Sectors: bubble chart. 07 Capital: allocation treemap. 08 Reports: annual-report PDFs.

4. Generating PDF tearsheets

Run make reports to produce reports/tearsheets/*.pdf (2 pages per company), reports/sector/*.pdf and reports/portfolio/portfolio_summary.pdf.

5. Calling the API

Start the server with make api then:

```
curl http://localhost:8000/api/v1/health
```

```
curl http://localhost:8000/api/v1/companies/TCS
```

```
curl 'http://localhost:8000/api/v1/screener?min_roe=15&max_de=1'
```

```
curl http://localhost:8000/api/v1/peers/IT%20Services
```

6. Troubleshooting

- DB locked? Close the dashboard/API and run make load again.
- No ratio data? Run make ratios after make load.
- Import errors? Ensure you run from the project root with a virtualenv.

Acknowledgements

Built over 6 sprints: ETL foundation, ratio engine, screener & peers, dashboard & valuation, NLP & reports, and clustering & API.
